

HIST293. AGE-ADJUSTED DEATH RATES FOR SELECTED CAUSES BY RACE AND SEX USING YEAR 2000 STANDARD POPULATION: DEATH REGISTRATION STATES, 1900-32 AND UNITED STATES, 1933-49

[Based on age-specific death rates per 100,000 population in specified group. Computed by the direct method, using as the standard population the age distribution of the total population of the United States as projected for 2000. Numbers after causes of death are category numbers of the applicable revision of the International Classification of Diseases. The classification is revised periodically to incorporate and capture changes in medical knowledge. The revisions, in some instances, do create breaks in the comparability of a cause of death between two years. Refer to Comparability Study reports for further information.]

SUICIDE

Cause of death and year	ICD Revision		Years in use		ICD Nos.					
	Sixth		1949-1949		E963, E970-E979					
	Fifth		1939-1948		163, 164					
	Fourth		1930-1938		163-171					
	Third		1921-1929		165-174					
	Second		1910-1920		155-163					
	First		1900-1909		155-163					
</										

---Data not available. No tables exist by age, race, sex, and cause for 1900-13 and 1917.

Note: 1) See last page of table to see when each state was admitted to the death-registration area.

2) No corrections were made for those deaths for which the age of the decedent was not stated or was given as unknown.

HIST293. AGE-ADJUSTED DEATH RATES FOR APPROXIMATELY 64 SELECTED CAUSES, BY RACE AND SEX: UNITED STATES, 1950-59

[Based on age-specific death rates per 100,000 population in specified group. Computed by the direct method, using as the standard population the age distribution of the total population of the United States as projected for 2000. Numbers after causes of death are category numbers of the seventh revision, International Classification of Diseases]
